## EDITORIAL NOTE

As a scientific publisher, LIPI Press holds on high responsibility to enlighten society's intelligence and awareness through the provision of qualified publication. This scientific book entitled *Orchidaceae Catalogue of Bogor Botanic Gardens* has encountered quality control mechanism through editorial process, including peer review and copy edit.

This book lists several orchids collected in Bogor Botanic Gardens. In this catalogue, orchids are arranged alphabetically by genera and species, followed by information about locality. Complete information regarding location, date of collection, collection number, and individual notes for each specimen are available in the Registration Office. Pot number is used instead of registration number for this catalogue.

We surely hope this catalogue will be useful for researchers, orchid enthusiasts, and others who want to know the orchid collection available in Bogor Botanic Gardens. As a final note, we would like to deliver our heartfelt gratitude to everyone taking part in the process of this book.

LIPI Press

## FOREWORD

The orchids of Indonesia have been attracting admirers due to their beauty and interesting forms. Many others have been observing to discover their hidden mysteries. Orchid popularity has increased significantly during the last few decades as new species have continuously been discovered and new findings have come to light any guide their potential economic value and utilization.

Since working on the orchid collection at Bogor Botanic Gardens in 1949, there had been only one catalogue exclusively published about orchids in 1999. *An Alphabetical List of Indonesian Orchid Cultivated in the Bogor Botanic Garden* listed over 7,178 specimens native to Indonesia, consisting of 441 species from 93 genera. Over the following fifteen years, the orchid collection has undergone many changes and the number of genera and species in the collection has grown.

This catalogue details the most recent information about the Bogor Botanic Gardens' orchids, including the number of genera and species maintained in the collection and their origins. This information not only enables orchid identification, but also provides data concerning orchid distribution as a basis for further study. Close-up photographs of the flowers are also provided as a helpful tool kit for identification. This catalogue will be useful for orchid enthusiasts, researchers and visitors to the Gardens.

We are grateful to all of the staff at Bogor Botanic Gardens who have helped to make this information available to the public.

Bogor, September 2014  
Director,

Dr. Didik Widyatmoko, M.Sc.

## PREFACE

Indonesia is rich in biodiversity and has abundant bio-resources. It is home to more than 5,000 species of orchid, one-fifth of the world's total. Indonesia's orchids are widespread across the Indonesian archipelago, from the east to the west of the nation. Although many new species have been found in the past few decades, many others are threatened by the loss of natural habitat from fires, forest damage, and illegal logging. The World Conservation Monitoring Centre (1995) reported that the orchids of Indonesia have the highest rate of extinction before being described or documented.

Since being established in 1817, Bogor Botanic Gardens have played a role as the first botanic gardens in Indonesia concerned with conservation. It is not known exactly when the orchid collection was started, but it was formally registered as a part of the Bogor Botanic Gardens collection in 1949. Since then, the orchid house has sheltered more than 500 species of orchids collected during scientific explorations. The collection consists of epiphytic, terrestrial, and saprophytic species. A working list of the orchid collection, compiled over a period of 2 years, has recorded 6,004 specimens, consisting of 499 species from 94 genera.

In this catalogue, orchids are arranged alphabetically by genera and species, followed by information about locality. Complete information regarding location, date of collection, collection number, and individual notes for each specimen are available in the Registration Office. Pot number is used instead of registration number for this catalogue. The pot identification number consists of 3 parts, indicating genera, pot position, and specimen number. The first part consists of the capital letter and numeric indicating genera of the specimen. The second part consists of capital letter and roman numeral. The first capital letter is followed by a roman numeral which indicates the location of the specimen (see map): A, B, and C are located in the main glasshouse (A on the left side, B in the centre and C on the right side), D in the right glass house, E in the left glass house, G in the Griya Anggrek and O in the Orchidarium. The second capital letter indicates the position of the specimen (A under the bench, B on the bench, C hanging, D on the wall). The last part contains numeric identification (1, 2,...etc.) which indicates the order on the alphabetically listed specimen, followed by a lowercase letter which indicates replicate number.

We hope that this catalogue is a useful resource for researchers and orchid enthusiasts alike. Any feedback is appreciated so that future versions may be improved, both in quality and usability.

**APPENDIX**

## AUTHORS' BIOGRAPHY

**Richa Kusuma Wati**, born 17 August 1984 in Malang, is a researcher at Center for Plant Conservation Botanic Gardens-LIPI. After graduating from SMU 8 Malang in 2002, she got Bachelor Degree from Department of Agricultural Technology Brawijaya University, Malang in 2006. She received Master Degree in Agriculture from Mae Fah Luang University, Chiang Rai Thailand in 2009. She has worked at Center for Plant Conservation Botanic Gardens since 2010, with specialization in Native Orchids Collections.

**Sofi Mursidawati**, born 4 September 1968, is a researcher at Center for Plant Conservation Botanic Gardens-LIPI. After graduating from SMA 14 Bandung, she got Bachelor Degree in Biology from Department of Mathematics and Natural Science Padjajaran University, Bandung in 1993. She started working at Bogor Botanic Garden in 1994, specializing in tissue culture at Laboratory of Tissue Culture. She continued her study in University of Western Australia and received her Master of Science in 2003. Currently, her research focus on biological conservation of orchids and rafflesias.

# *Orchidaceae Catalogue of Bogor Botanic Gardens*

Indonesia hides some of the most beautiful orchids in the worlds. Many people have tried to unravel those orchids and discover their true beauty. During the last few decades, many new species have been discovered, along with the information about their economic values and utilizations. This has made orchids even more popular among many people, as well as researchers.

This book serves as a catalogue that details the most recent information about the Bogor Botanic Gardens' orchids, including the number of genera and species maintained in the collection and their origins. The catalogue provides orchids' identifications, as well as data concerning their distribution as a basis for further study. Close-up photographs of the flowers are also provided as a helpful addition for identification.

This catalogue will be resourceful for orchid enthusiasts, researchers and visitors to the Gardens.
